

7 THINGS YOU'LL NEVER HAVE TO WORRY ABOUT When You Switch Brands to Shaklee.

We've all heard the news stories talking about nutritional supplements that have been found to be ineffective, contaminated, or even dangerous. Here are **7 common problems** associated with other supplements that **you'll never again have to worry about**, once you've switched brands to Shaklee.

- 1. Is what's on the label actually IN the product?** Independent testing consistently reveals nutrient levels can vary significantly from bottle to bottle and tablet to tablet. Shaklee has the highest standards for purity and potency, near or surpassing pharmaceutical grade manufacturing practices, and conducts over 80,000 quality assurance tests every year to make sure that every batch delivers what is promised.
- 2. Will the products break down in time for them to be absorbed by the body?** Many products, even ones by major manufacturers and those claiming USP certification, don't release nutrients at the proper time for them to be utilized. Shaklee's products are clinically proven to work and contain unique delivery systems that boost absorption.
- 3. Am I 'pissing' my money down the toilet?** Using the philosophy that "more sounds better," some supplements create "expensive urine" by delivering excessive amounts in a single dose. Shaklee has spent over \$300 Million on research and development to make sure they are delivering the right amounts to the right place at the right time.
- 4. Are these products really free of heavy metals and pesticides?** The AMA estimates that as many as 20% of all over the counter herbal products are contaminated with heavy metals and pesticides. Shaklee utilizes in-house and 3rd party testing rather than relying exclusively on suppliers claims and thus can actually guarantee purity.
- 5. Is it safe and natural?** Products containing synthetic nutrients, artificial colors and preservatives are everywhere. Some even contain illegal drugs and unsafe herbal stimulants. Every few years, we hear about products containing unsafe ingredients being recalled, some after causing injury or death. Unlike other companies, Shaklee has never sold products containing these kinds of ingredients (e.g., ephedra, kava kava, etc.) because safety is the #1 priority for every Shaklee product. Plus, Shaklee has an unwavering commitment to produce only products that are "In Harmony with Nature and Good Health."
- 6. Am I throwing my system out of balance?** By focusing on individual nutrients (the "magic pill" syndrome) rather than optimum health, many companies overload with cheap nutrients, skimp on expensive ones and don't include the complementary nutrients and co-factors that are required for maximum utilization. Rather than "marketing hype," Shaklee uses sound science and delivers well balanced, full-spectrum formulations with multiple complementary nutrients that increase the product's effectiveness.
- 7. Will this product really do any good?** Many health product claims are unfounded, overblown and misleading. Consumers are right to be skeptical. That's why every Shaklee product and health claim is substantiated with proven science and clinical studies published in peer-reviewed studies. It really works!

With other supplements, there are lots of things to worry about. But with Shaklee, you can relax and take comfort in knowing that they have the highest quality standards in the industry and deliver pure, safe, natural, and effective products that do what they say they will do every single time. 100% Guaranteed.

Remember, with Shaklee you actually **get** what you pay for.
